Description

This opportunity presents a specialized dental laboratory founded in 2008 and based in Omaha, Nebraska, providing high-quality crown and bridge restorations and implant solutions exclusively to dental professionals. The business has built a strong reputation for precision, consistency, and attention to detail, serving a loyal B2B client base of medical professionals. All services are delivered through a modern digital workflow utilizing industry-leading software, enabling efficient case intake, design, and production. The lab spans roughly 1,200 sq ft which is ample space for production. The operation is currently led by the owner, who is involved in day-to-day management, supported by a laboratory technician. The seller is pursuing a transition as part of retirement and is willing to provide training and support for 6 months to 1 year to ensure continuity. The business has grown organically through relationships and repeat clients, with little to no marketing investments being made, presenting a clear opportunity for expansion through targeted outreach and business development initiatives. Additional upside exists in expanding service offerings to include removable implant solutions and increasing production capacity through strategic hiring.

Priced at **\$165,000** this opportunity is well-suited for a buyer with experience or familiarity in the dental industry who can maintain the company's quality reputation while leveraging its untapped growth potential.
